

Executive Brief

Inventory & Waste Management

Comprehensive fresh inventory and waste monitoring to increase sales and reduce waste.

Inventory & Waste Management

Having a full view of the inventory in your stores is paramount. Real time tracking and analytics of on-hand, transferred, and discarded fresh food items is needed to manage your fresh food inventory as efficiently as possible.

Gain the visibility needed to reduce inventory losses, enhance food safety and improve margins with real time reporting of physical and perpetual inventories along with in store traceability.

From the time it reaches your backroom to the time it's sold, you can count on ADC's Inventory & Waste Management solutions to help increase your sales margins while reducing food waste.

Key Benefits

Maintain perpetual inventory through transfers, waste capture, labeling totals and sales data

Create at-case markdowns with replacement labels or cents-off coupons from portable printers

Send alerts to associates when an inventory exception is reached

Key Features

Inventory Management

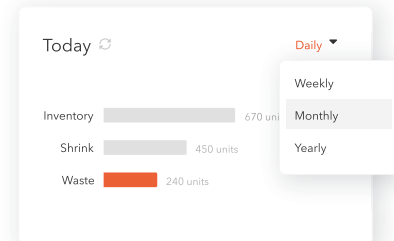

- Scan and count physical inventory
- Access real-time perpetual inventory cycle counts
- Manage backroom, saleable, and work-in-progress inventory

Shrink Management

- Understand yield out of primal
- Manage reworked sales floor items to prepared foods
- Seamlessly push and implement price markdowns

Waste Management

- Scan and track donated and discarded items
- See the total number of items lost

Reduction in food waste

Reduction in markdowns
